— THE PROBLEM

Churn starts before cancellation.

52%

Consumers cancelled at least one subscription in the past year.

Recurly · 2026 State of Subscriptions

20%

Of Unbounce cancellations were linked to billing errors or expired cards.

Unbounce · Recurly case study

Who's at risk? How soon? Who should we help first?

Sources: Recurly, 2026 · Unbounce case study (company-specific)

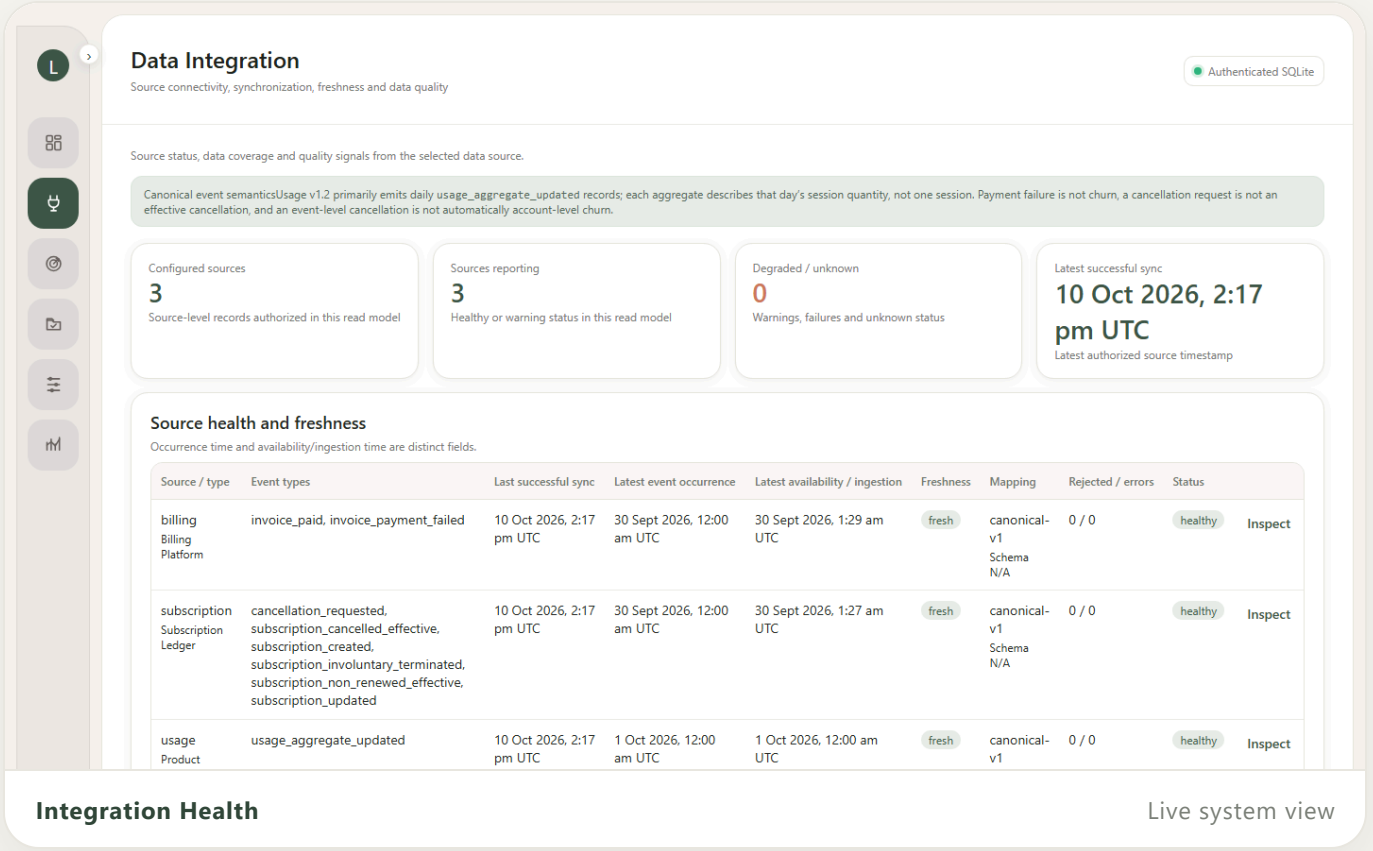

01 CONNECT

Connect

Connect existing data securely.

- Historical CSV import + authenticated Push API
- Canonical normalization + tenant isolation
- Source health, freshness, and sync visibility

Frontend and SQLite API are connected end to end.

Integration Health Live system view

02 PREDICT EARLY

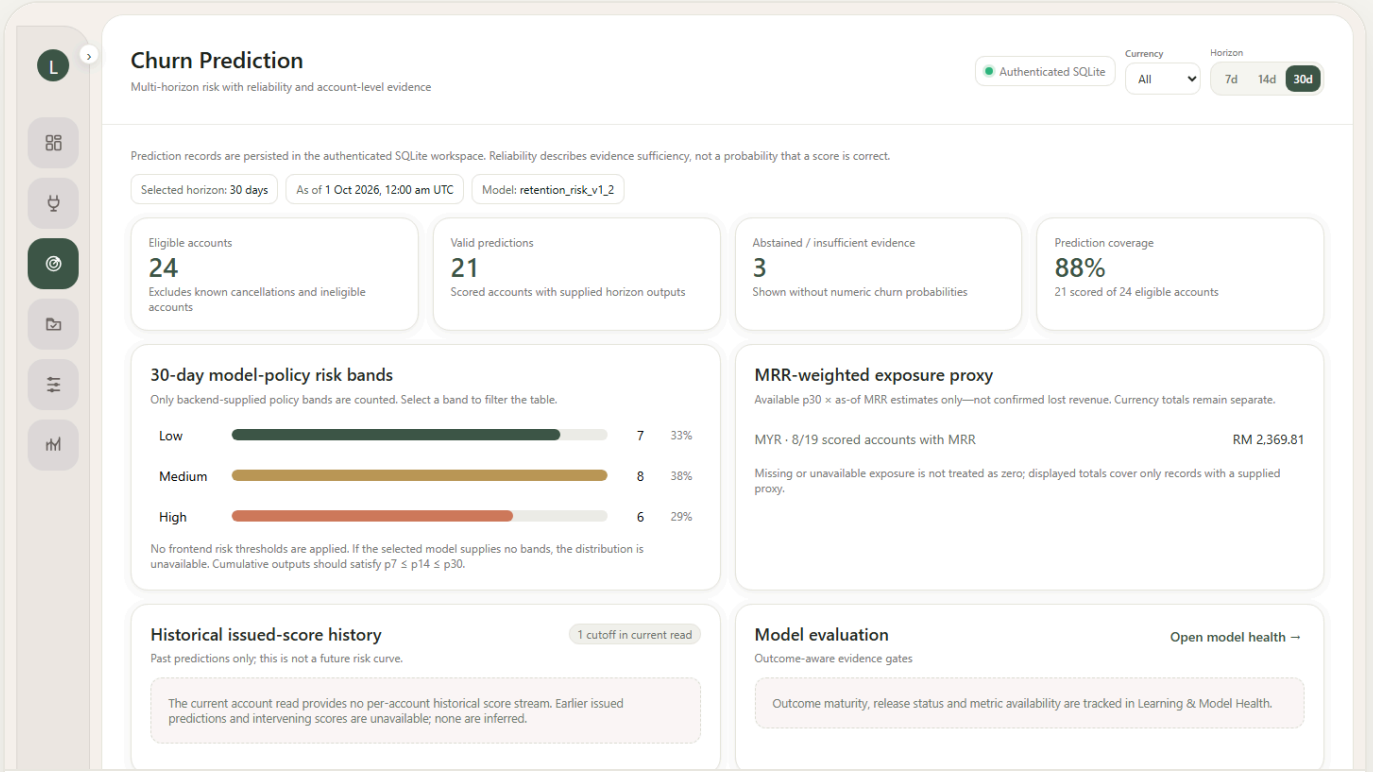

Predict Early

Spot churn risk before cancellation.

- 7 / 14 / 30-day forecast horizons
- Personal behavior baselines
- Explanations, evidence gates, and abstention

Know what's unusual for each customer.

Scored accounts, reliability, and evidence are served directly from SQLite.

Prediction Radar Live system view

03 DECIDE

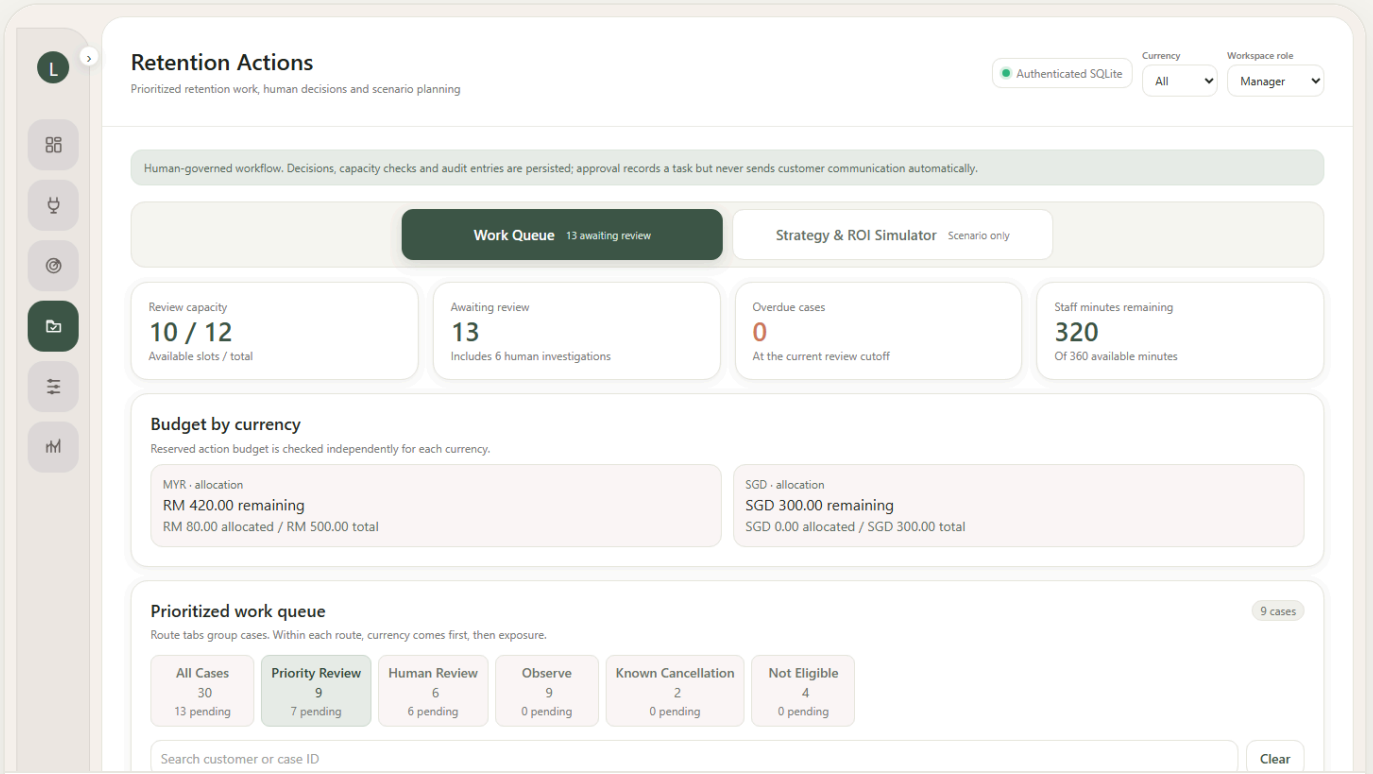

Decide

Turn risk scores into real decisions.

- Priority Review / Human Review / Observe
- Risk × MRR within review capacity
- Evidence-backed actions with owner and status

AI recommends. Humans decide.

Case assignments and decisions persist through the backend API.
